Review Pet Rescue
King

Pet Rescue Saga is a puzzle game that is easy and fun to play. You have to save the pets by making combinations of cubes. All matches must be the same color, this requires logical thinking and good planning ability because you don't have countless moves. For players who want to master this game, there are many interesting levels

Pet Rescue Saga is a well-known web **application**. It was built by the same creator of Candy Crush Saga and is quite similar in aesthetic terms and follows the same line, with the exception of its purpose and objective.

As an initial presentation we have, apparently with the Candy Crush iPhone application, not a board but a level path that runs through a magical field, that wonderful and somewhat magical field has a waterfall, a cat and giant mushrooms, a castle and a turkey in the hat and the clock. As we progress through the game the field is transformed into a city with some giant animals.

The objective of the Pet Rescue Saga varies a little from level to level, but one thing is certain: the user has to make joints of blocks of the same color, at least two after turning them off by clicking on them with the mouse, the more blocks the player clean, more score gets at the end of the level.

The **Pet Rescue Saga** is quite fun and addicting. Suffice it to say that it is passed around animals and that the user has the function, on various levels, to save their lives. In addition to that this is a strategy game and the user has to think with a certain number of plays in order to get the correct block splices, getting a maximum number of points and cleaning the entire game screen.

This game implies that the user has contact with the other players. Lives and unlocks for some levels are only achieved through your friends. This can be an obstacle for some people.

This game has some nice sound effects that you can hear when you match the boxes of the same colors. But for each given combination, different sound effects may appear, for example, when you make a simple combination of the two cubes, the amount of dots will be animated and zoom out with some sound effect for that in the background. When you do bigger combinations like cleaning blocks, there will be a different sound and more visual effects. A little theme will support the message to complete a level.

After each level, some statistics will appear on the screen with an intuitive button to share your score on the Facebook platform and also how good your performance was and the index of the previous level. Before starting the next level, you'll see a simple animation of the roadmap with levels, and then another quick menu will appear with instructions on what to do in the next challenge.

Changes include things like reaching a certain amount of points and taking 3 pets away, for example, so pay attention to these kinds of rules at the levels as you pass. In the game, you will see that there are many different types of enhancers and tools, and with additional information on how to use them. Be on the lookout for all kinds of premium boxes with multiplication signs that can increase your score results.

The structure can be very different at the beginning of the game, you can easily underestimate it and think that it is only made up of cubes that need matches and not easy, but as we said before, sometimes there are some obstacles that can only make you think More logically, how to save pets as long as this is the main focus of the game.

The obstacles may be in the form of some tragic things that remain between the cubes and perhaps it looks like a

structure, but you will see that they do nothing. On the other hand, you have things like bombs that are interactive, so don't touch them, you'll see them rounded. You can also see the bomb that is in some glass cubes, but again it is easy to recognize them, so don't worry, these glass cubes will be destroyed after the collision and then the pump will be left alone.

And again, after completing the level, you will see the brief animated trailer representing how you move on the game map. All levels are separated into episodes, which means that in an episode there are a few levels. But like many other games, you can compete with other players and follow through with some very good challenges.

Pros	Cons
- This is a game in which various tricks are developed - It can contribute to the psychomotor development and spatial orientation of the students. - A very useful aspect for younger students. - No violence involved	- It can cause dependency - Sometimes it is necessary to make purchases within the app - Some levels can be complex
